Adobe Photoshop CC UXP Localization Plugin

Custom Enterprise solution delivers automated localization an enterprise first.

Introduction

Photoshop is one of the most widely used software in the design industry. Adobe Photoshop has been providing great features and capabilities to its users since its inception. In recent years, the introduction of plugins has further enhanced the functionality of the software. However, with the latest updates to Photoshop, the introduction of the UXP platform has completely transformed the plugin ecosystem. This white paper discusses a custom UXP plugin that has been created to provide scale automation of localized content of assets from a web accessible content CMS in Airtable by way of API.

Overview of the Plugin

The custom Photoshop UXP plugin that has been created enables the latest features and capabilities of new age plugins. It enables scale automation of localized content of assets from a web accessible content CMS in Airtable by way of API. This plugin provides users with the ability to quickly localize email, site, and channel assets in seconds compared to previous workflows. The plugin is built using the UXP platform, which provides a range of advantages over previous plugin development platforms.

Advantages of UXP

The UXP platform has completely transformed the way plugins are developed for Photoshop. The following are some of the key advantages of UXP:

Improved Performance: The UXP platform is designed to provide better performance compared to previous plugin development platforms. This is achieved through improved memory management and optimized code execution.

Cross-Platform Support: The UXP platform is designed to work seamlessly across multiple platforms, including Windows, macOS, and iPadOS. This allows for a broader audience to access and use the plugin.

Better Integration: The UXP platform allows for better integration with other Adobe products. This provides a more seamless user experience when working with multiple Adobe products.

Improved Security: The UXP platform is designed with improved security features that protect user data and intellectual property.
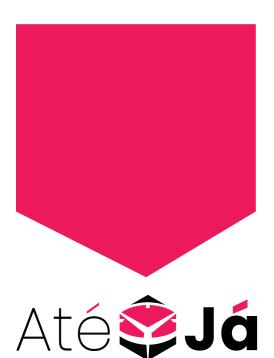

Features and Capabilities

The custom Photoshop UXP plugin provides the following features and capabilities:

Scale Automation: The plugin enables scale automation of localized content of assets from a web accessible content CMS in Airtable by way of API. This allows for the quick localization of email, site, and channel assets in seconds.

Improved Workflow: The plugin enables a more efficient workflow for users, reducing the time it takes to localize assets and improving productivity.

Cloud Integration: The plugin is integrated with Airtable, a web accessible content CMS, which allows for seamless cloud-based access to assets.

Customization: The plugin can be customized to meet specific user needs, allowing for a more tailored user experience.

Conclusion

The custom Photoshop UXP plugin has been designed to provide users with the latest features and capabilities of new age plugins. It enables scale automation of localized content of assets from a web accessible content CMS in Airtable by way of API, allowing for the quick localization of email, site, and channel assets in seconds. The UXP platform provides a range of advantages over previous plugin development platforms, including improved performance, cross-platform support, better integration, and improved security. Overall, this first-of-its-kind plugin has enabled a more efficient workflow for users and improved global productivity.
